

M1 CONE Odor Control Cover

- The M1 CONE are suited to cover pre-tanks and post digestion tanks. They can be designed to cover the slurry tank for odor containment and rainfall protection or even to be gas tight and to serve as gas single membrane;
- They can cover round tanks from 10 m to 40 m diameter;
- The conic shaped covers are supported by a central pillar made either in steel or concrete that ensures the required wind and snow resistance. A support structure made with plastic ropes and a net, sustained by a central pole in steel or concrete, is positioned under the gas chamber.

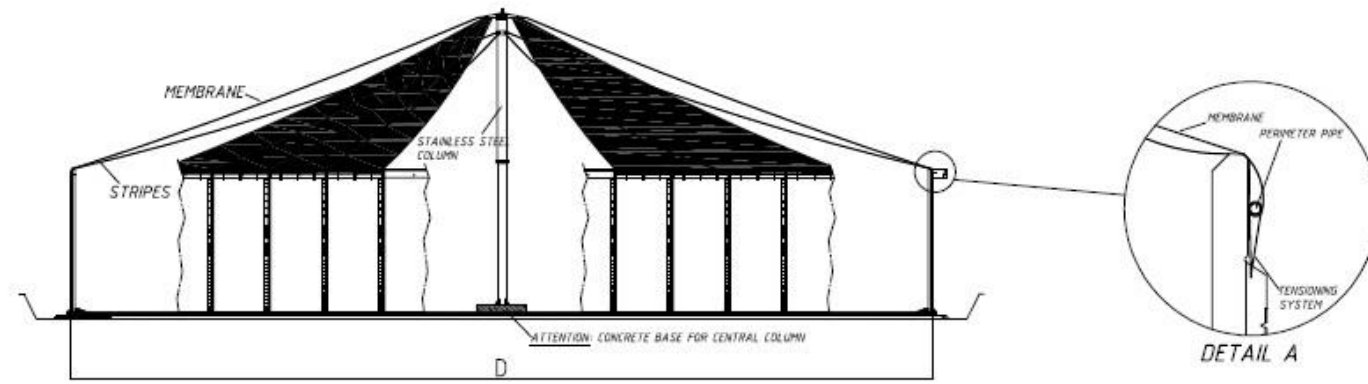

M1 CONE Cover

MAIN COMPONENTS

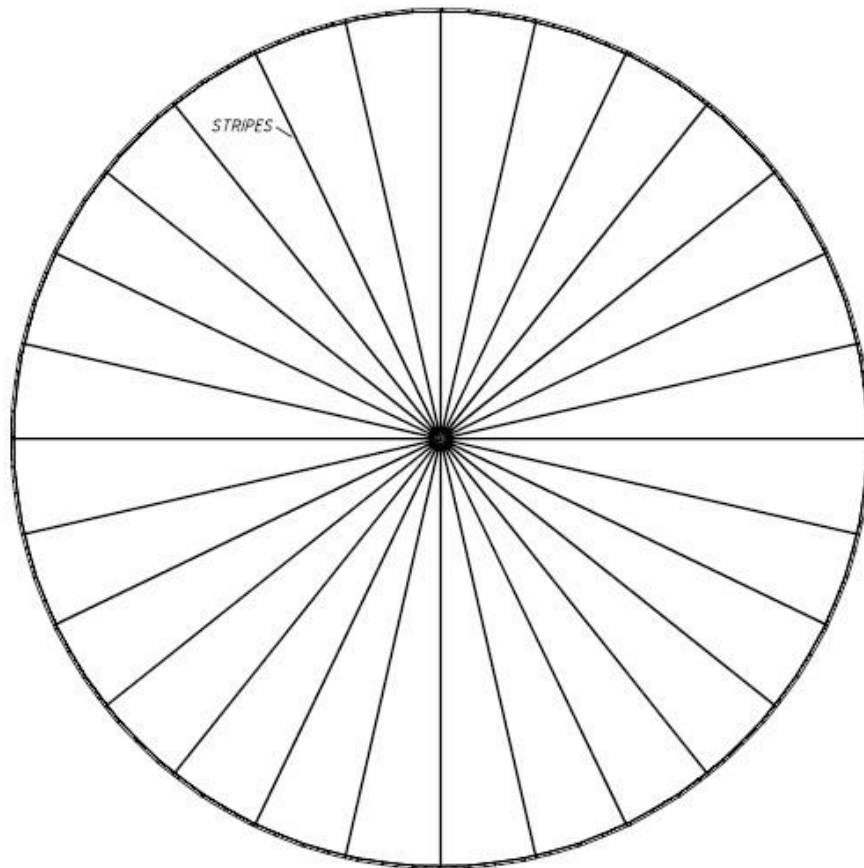

- Membrane cover;
- Central Pillar;
- Anchorage System;
- Special Top Opening (for mixers);
